

“Having worked with the Restore London team previously I knew that they would deliver top quality cleaning and restoration works on this very important ITC Project. Much to our Client’s delight this was the case and this excellent Project benefitted from Restore London’s involvement – well done.”

Luke Osbourne - Commercial Manager, ITC

Scope of Works

Winning the cleaning & restoration package at competitive tender, Restore London worked closely with Principal Contractor ITC to deliver this highly ornate Portland stone façade in the heart of London’s sought-after West end. Super-heated and wet abrasive and some poultice applications were applied to clean the building to the Client’s expectation. Our Project team then carried out a comprehensive survey of the façades, picking up the existing defects & prioritising that required in order of most serious to aesthetic. Re-pointing, mortar repairs and natural stone indents were undertaken in line with the Clients instructions. Once complete we installed a full pigeon deterrent system.

Project Name:	63 St James'
Location:	London
Client:	Citi trust
Principal Contractor:	ITC Ltd
Duration:	12 weeks
Completion Date:	June 2021
Value:	100k
