

“I have found Restore London’s overall approach very professional, in particular their site team have been responsive and very helpful. The quality of the finished work is excellent.”

Harriet Price – Contract Administrator, Raglan International

## Scope of Works

External sympathetic repairs and remedial works were undertaken to these Grade II listed mews in Kensington. The part cobbled, gated cul-de-sac, approached through its own arch on Canning Place in the Royal borough, contains 17 properties now used for residential purposes, but were originally a working stables / coach house. Initially constructed in the 19<sup>th</sup> Century, the Mews and its surrounding buildings withstood the impact of high explosive bomb in 1941 which fell close by.

Restore London’s work was planned & executed in full compliance with the “De Vere” Conservation Area controls. The project consisted of preparation & re-decoration of the brickwork facades, the ornate woodwork & metalwork within & the mansard roofs repaired. Restoration works, which included rebuilding of parapets also extended to Canning Place Mews, De Vere Gardens & Kensington Palace Elevations.
