

“A very complex Project, made more difficult by the proximity of the general public and the busy surroundings, however the concrete façade cleaning and restoration carried out by Restore London fully met the team’s expectations.”

Ian Hopkinson – Director, McLaren Construction

Scope of Works

Restore London undertook the cleaning & restoration of the façades of this predominantly concrete structure in an exceptionally busy area of central London.

Additionally, steel treatments and pre-cast panel replacement works, including design, co-ordination, and pro-active assistance for the new elements, were carried out by our highly experienced team.

Restore London employed extensive use of water protection systems to contain water and installed temporary guttering systems/run offs during the cleaning works to ensure the general public were protected throughout.

Project Name:	Mabledon Place
Location:	London
Client:	Stanhope
Principal Contractor:	McLaren Construction
Duration:	18 Weeks
Completion Date:	November 2014
