

“The Medical Chambers Kensington is a high-end multidisciplinary clinic in West London. Our building was in need of complete redecoration and some repair. Our project manager interviewed several contractors and Restore London were easily the most professional and well structured, which gave us comfort that the job would be delivered without problems. This is exactly what they did. Their team were always available at the end of a mobile, dealt promptly and positively with any issues. We are delighted with the result.”

Ivor French – The Medical Chambers

Scope of Works

A highly detailed programme was required on this project due to the sensitive nature of this Private Clinic’s work. The works had to take due consideration of the Clinic hours of business (24 hrs) whilst also considering patient privacy & needs.

Highly effective, structured communication with our client was an essential element of this project and its ultimate success being completed on time, on budget and to the client’s delight.

The Restore London team replaced numerous double-glazed window units, along with significant window repairs, some minor roof repairs, masonry repairs & complete decoration. Samples were carried out with our professional input resulting in a beautiful finish to this satisfying façade restoration project.
