

“I’ve given Restore London a variety of different jobs and they’ve always provided a professional, reliable service. Their work at the Gherkin was first class”

Robert Rankin , Client -IVG Asticus

Scope of Works

Our design team painstakingly surveyed & reproduced individual templates for each radial replacement stone, while our delivery team resourced precise replications of the granite originally used, including an exact texture match. The RL team successfully tracked down the continental quarry concerned & using our network of worldwide agents we controlled and managed the manufacture, transportation, delivery & installation. The works also included a new bespoke, state of the art entrance matwell & the coordination of the revolving doors refurbishment, all in line with the Client’s quality expectations, phasing & programme requirements. Further works were instructed including the replacement of the 17th floor lift lobby & various other maintenance and repair projects.
