

“We have been really impressed with Restore London who have delivered a great quality project - I would most certainly recommend their services without hesitation”.

Mark Worrall – Senior Quantity Surveyor

Scope of Works

This Grade II Listed Victorian building was erected in 1897 and consists primarily of white stucco facades, large windows on the lower & smaller ones to the higher levels. Restore London’s fourth successful project of a similar nature in the area, all of which included an initial full defect survey of all elevations, supported by a detailed repair strategy tailored to the project’ budget.

A comprehensive repair schedule was approved, and the team carried out the restoration to a very high standard. This was then followed by full preparation & redecoration to the Stucco. A new natural stone paved entrance way was added and stands as a fine addition to this beautifully restored building.

Project Name:	23 -26 Lancaster gate
Location:	London
Client:	Hapimag
Principal Contractor:	Paragon
Duration:	24 Weeks
Completion Date:	June 2019
Value:	£350K
